

# STREET LITTERING, WHY?

Reported by: Tommaso Valentinetti

Recently in a country called Malta, we found loads and loads of litter all around the country, “we hardly found some clean streets,” said a 14 year old from Bad Boy Cleaners.

“I think the citizens don’t know how important this is!”.

People literally went in front of the apple store with signs saying “I don’t litter”, “We don’t want Iphones! Neither I litter!”

We also went to Gozo and found a bunch of abandoned schools which were vandalized and mostly especially full of trash. “It was everywhere! You just couldn’t escape it!”.

How do we stop littering? First of all we have to be responsible of our proper actions, we have to care about this stuff! Otherwise the earth be destroyed if we don’t act now, do your part! Don’t take the trash out the day before because the garbage bag could break and the trash will come out and fly away in the streets or even in the sea! We could harm the animals not only on land but also in the sea! Imagine you drop a plastic bottle in the sea, it could be swallowed by a fish by accident and eventually kill it. Litter also makes the sea dirtier, but worse part of it is that it will take 500 years for plastic to break down! Imagine all of those innocent sea creatures getting harmed or even dying because of litter thrown in the sea.

We could also get unwanted diseases which could be even worse than the present /past ones.

What must be done? We need to put up more signs saying do not litter, we need more laws and higher value fines for the people who street litter.

A youtuber called “Enviroment Nerd” made a video of expiring people by hiding in a bush at a park near Sliema.

Everybody, do your part! And we will have a better planet from now on!
